

Certified Scrum Master (CSM)

The goal of this course is to create a learning experience tailored to professionals seeking a deep exploration of Scrum and the broader ecosystem of agile within a safe non-judgmental atmosphere.

To this end, our teaching philosophy promotes a “learning by doing” approach to provide individuals with the knowledge of the rules, roles and practices of Scrum and accelerate the conceptualisation of Scrum concepts. We create the conditions for learners to feel the experience of Scrum, gain a hands-on appreciation of the tools and the temperament needed to be an agent of change striving for a sustainable future of work.

All learning styles and levels of experience are considered, our trainer’s adaptive approach to the course’s agenda ensures the learning goals of the group influence the format and the content covered.

Fast Facts

Duration: 2 days

Max attendees: 18

Style: Hands-on, energetic and fun

Dress code: Casual and comfortable

Certification Process

Upon completion of the course the Scrum Alliance will be notified and access to sit the certification exam granted. To be sufficiently prepared we recommend you study our carefully curated reading and viewing list. The time commitment is typically under 2 hours and materials will be shared with participants no later than 1 week post completion of the course.

Product Owner	Sprint Planning	Potentially Shippable Product Increment	Product backlog grooming
Scrum Master	Daily Scrum	Product Backlog	Work in-progress limits
Development Team	Sprint Review	Sprint Backlog	Systems Thinking
	Sprint Execution		Complexity Theory
	Sprint Retrospective		

About your trainer

Martin is a pioneer in the field of Agile, he was one of first three certified enterprise coaches in the world by the Scrum Alliance. He was also accredited as an agile expert by Dr. Alistair Cockburn and has been a practitioner in agile methods for over 12 years.

His pragmatic approach and genuine thirst for personal growth is evident in his authentic stories and examples he uses to illustrate concepts in a training setting.

Recently, Martin has been examining the significance of agile in becoming an operational mindset for the future of work. He is now the Chief Digital Officer of Innodev and is focused on the synergy between partners, people and problems to generate the need for adaption.

Through his work in contracting methods, Martin has designed cooperative partnerships in response to uncertainty. He has spoken at numerous Australian conferences on this topic and his thought-leadership has been recognised through his selection to speak at the Scrum Alliance Global Gathering in Dublin this year.

Martin actively contributes to the Scrum community in Australia, being a director of Scrum Australia and frequent speaker at user groups and conferences. Martin is a co-author of the e-book "Agile Transition" (available through InfoQ), in which he and his co-author share their observations and conclusions about what is required when seeking to transition to an agile approach and the future of work.
